#### **Oroville Dam Spillway Incident**

- On 02/07/17 at 1000 hours, the Department of Water Resources (DWR) notified the California State Warning Center of an issue with the main spillway at Oroville Dam.
  - As of 02/11/17 at 0809 hours, lake water had begun lipping over into the emergency spillway.
    - Per DWR, the lake water will continue to rise approximately 2 inches an hour until it crests.
  - On 02/11/17 at 0830 hours, DWP advises:
  - The total flow of water from the reservoir, including the emergency spillway, is expected to be on the order of half of downstream flood system capacity and consistent with releases made at this time of year in wet years such as this.
  - The volume of water is expected to pose no flood threat downstream.
  - While DWR does not expect flows to exceed downstream channel carrying capacity, the rate of flow into the ungated emergency spillway may change quickly.
  - Oroville Dam itself remains safe, and there is no imminent threat to the public.
  - DWR continues to use the damaged concrete, gated spillway to discharge approximately 55,000 cubic feet per second, but the approximately 91,000 cfs inflow to the lake exceeds that discharge.
  - DWR and CAL FIRE crews in past days have been clearing trees and brush from the path water is expected to take in the emergency spillway, which is an unlined hillside.
  - The emergency spillway flows are expected to wash large amounts of soil and debris into the Feather River, and crews are positioned to remove as much debris as possible from the channel immediately downstream of the dam.
  - DWR is continuing to coordinate closely with state and federal wildlife and dam safety officials at Oroville Dam.

#### **Deployments**

- The Cal OES Fire and Rescue Branch Chief and Deputy Chief are on scene as of 02/11/17.
- A Cal OES Fire Branch Assistant Chief has been assigned as an Agency Representative.
- A Cal OES Law Branch Assistant Chief has been assigned as an Agency Representative.
- A Cal OES Deputy Regional Administrator has been assigned the Incident Command Post.
- 3 Cal OES Public Information Officers have been deployed to the Joint Information Center.

# **WEATHER OF CONCERN**

## **Weather of Concern**

- Southern California will experience heavy showers with a chance of thunderstorms tonight due to winter storm activity.

## **Active Weather Warnings, Watches and Advisories by County:**

[http://www.wrh.noaa.gov/sto/brief/wwa\\_bc\\_cal.php](http://www.wrh.noaa.gov/sto/brief/wwa_bc_cal.php)

# **WEATHER SYNOPSIS BY REGION**

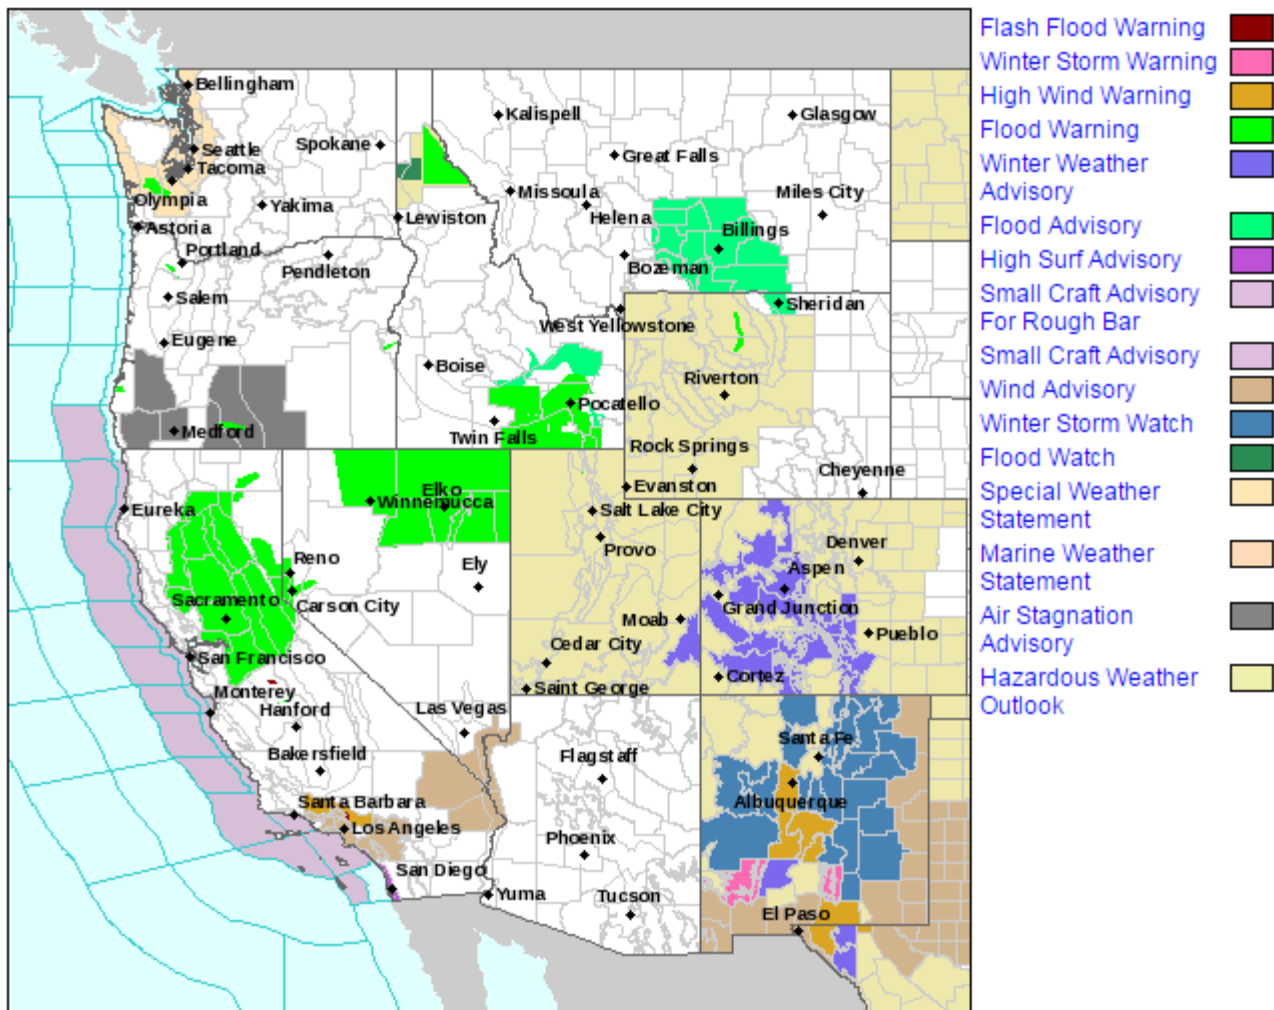

## **NORTHERN CALIFORNIA**

Rivers will have the chance to recede this weekend. Dry, sunny weather is in the forecast through Monday. Aside from low clouds and valley fog in the mornings, skies will be sunny thanks to an upper level ridge being in control over the weekend. Wet weather is expected to return to the area late Tuesday. Keep in mind that river and stream levels are still elevated, and that soils are still saturated which could cause additional downed trees or landslides. Snow levels are expected to go below pass levels to impact mountain travel.

## **SOUTHERN CALIFORNIA**

The snow level will drop to between 5,000 and 6,000 feet this morning. South to west winds of 15 to 30 mph with gusts to 50 mph will surface across the mountain ridges and desert passes through tonight. Temperatures will cool 5 degrees today. A ridge of high pressure will build into California from the Pacific Ocean bringing a warming and drying trend to the region tomorrow through the middle of next week. North to northeast winds of 20 to 40 mph with gusts to 60 mph will surface across the mountains and below the canyons and passes of Southern California tonight through Sunday night. At this time, it looks as though a series of Pacific storms will move into the West Coast bringing periods of heavy rain to the entire area along with strong south to west winds across the mountains and deserts starting Thursday.
